Welded Full Finish & Ornamental Stainless Steel Tubing

Tubular Steel, Inc. has identified several industries that benefit from the use of pre-polished 304/L or 316/L A554 for moderate forming and 304/L or 316/L A249/A269 where severe forming is required.

Customers in these industries are saving up to 35% on their finishing costs by utilizing A554 pre-polished material. The use of A249/A269 results in reduced scrap in specific applications.

In addition to the benefits of using alternative specifications TSI has provided documented saving by reducing the costs of holding inventory.

TSI creates customer specific just-in-time (JIT) inventory scenarios that include, in some cases, daily shipments. This eliminates the need to hold inventory, further reducing capital requirements, storage space, and reducing the risk of damage to inventory in storage.

The JIT programs are supported from all of our six distribution centers supporting your own multi-facility manufacturing as necessary. TSI's own truck system provides expedited delivery via flatbed truck resulting in efficient receiving at your facilities.

Typical Uses of 304/L A554

The heart of any JIT program include IT systems and responsive sales people to ensure your inventory is just-in-time. With our dedicated “800” numbers to our sales people you are never stranded in voicemail.

With seven strategically located operations nationwide, Tubular Steel, Inc. stocks over 6,000 separate combinations of carbon and alloy pipe/tube products providing our customers and our markets one of the widest breadths of product offerings in the industry.

We welcome the opportunity to quote your steel service requirements.

Finishing

Our manufacturers buff and polish in-house to provide better controls and to furnish the highest quality consistent finishes.

Providing a quality finish has saved time and money for our customers.

We provide mill finish, bright annealed finish, 180 & 600 grit polished material.

Packaging

For maximum protection, the tubes are packaged directly off the polishing/buffing line.

All polished or buffed tubing is covered with a paper or plastic wrap and heavy duty packaging to protect the surface finish.

Full carton quantities are shipped in the original wooden crates following spot inspections. Smaller orders are banded, bundled and carefully packaged in heavy duty cardboard “U-crates” for optimal protection.

Superior Quality

Our quality is carried throughout our entire process from our mills to your dock.

We exceed standard specifications on all our A554 tubing.

We are committed to strict quality control policies and procedures.

Our customers can trust that they will receive the premium products they require.
